## *Filmed, In production*

- ORIF for Bimalleolar Ankle Fracture
- LISS Plate for Distal Femur Fracture
- Diagnostic Hip Arthroscopy
- Diagnostic Ankle Arthroscopy
- Peroneal Tendoscopy, transition to Open Tendon Debridement
- Brostrom-Gould Procedure
- Deltoid Ligament Repair

Dear Colleague,

I'm writing to you on behalf of the Journal of Medical Insight (JoMI) to explain its purpose and relevance. As an aspiring orthopedic surgeon, I have found great joy in taking part of a project I truly feel will make a difference for medical students, residents, and attendings alike. All too often, we find ourselves in need of a visual aid to help us learn or remember the small details associated with surgical intervention. Who better to learn a Bankart repair from than the Chief of Sports Medicine at Mass General Hospital, Dr. Matthew Provencher? Or a TKA from the Chairman of Orthopedics at Brigham and Women's, Dr. Thomas Thornhill? Situated in the heart of Boston, JoMI collaborates with world renowned hospitals to give users access to some of the most reputable operating rooms. JoMI expands on commonplace surgical technique videos by:

- Optimizing the virtual operating room experience through multiple angles captured in HD by a dedicated video production team
- Professionally filming, editing, and supplementing content with animations and chapter navigation to provide an ideal learning environment
- Gaining insight from our expert contributors through thorough interviews pre- and post-op, in addition to live commentary
- Supplementing videos with comprehensive articles that describe each case from start to finish

As a journal, JoMI screens submissions for publishable content and maintains a constant high standard for video quality, offering a reliable source of video education second to none.

I truly hope you enjoy our journal.

Sincerely,

**Michael C Nasr, MD**
